Pedro González

PYTHON BACKEND DEVELOPER

EMPLOYMENT HISTORY

Python Backend Developer

OCT 2024 - MAR 2026 / CODERIO

- Contributed to the development of a credit management system focused on data collection, validation, and documentation by integrating OpenAI-powered APIs (ChatGPT) and orchestrating workflows with LangGraph to automate processes and improve operational efficiency.
- Supported and optimized AWS Lambda serverless functions, improving performance, reliability, and maintainability.
- Implemented new API versions for Coderio clients using FastAPI, ensuring scalability and adherence to best practices.
- Developed account statement generation services using ReportLab, automating financial document creation and delivery.
- Designed and implemented a disbursement processing system using AWS SQS to ensure resilient and asynchronous transaction processing.
- Developed a card and cardholder management system through integration with the Airwallex platform.

Python Backend Developer

SEP 2020 - JAN 2024 / COLUMBUS DE MÉXICO

- Contributed to the development of a personal investment and savings platform built with Flask following a hexagonal architecture. Implemented asynchronous communication using RabbitMQ and Kombu to build event-driven publishers and consumers, contributing to a decoupled, scalable, and maintainable architecture.
- Integrated the Kuspit platform into the system, enabling core investment-related functionality.
- Led the integration, maintenance, and ongoing support of the Kuspit platform, including the implementation of new features and enhancements.
- Developed an internal address management system based on SEPOMEX data.
- Implemented a push notification module using Firebase Cloud Messaging (FCM).
- Provided support and maintenance for the first version of the investment and savings platform, ensuring operational stability and reliability.
- Participated in technical training focused on Java application development using Spring Boot.

Python Backend Developer

DEC 2018 - SEP 2020 / MOBILENDER

- Developed new features for a credit management system, contributing to the continuous evolution and enhancement of the product.
- Integrated credit bureau services to support credit profile validation and risk assessment.
- Developed an internal address management and normalization system based on SEPOMEX data.
- Integrated the Quien es Quien service to support compliance processes, including PEP (Politically Exposed Persons) and AML (Anti-Money Laundering) validations.
- Developed services for guarantor management within the credit platform.
- Performed data analysis and generated reports using Pandas to support business and operational decision-making.

TECHNICAL SKILLS

Tech stack

- Python
- Django
- Flask
- FastAPI
- Linux
- Docker
- Docker Compose
- Terraform
- Pyenv
- RabbitMQ
- Redis
- Celery
- JWT
- Swagger
- Git
- GitHub

Tools

- Request
- Asyncpg
- Flask restx
- Marshmallow
- SQLAlchemy
- Alembic
- Pytest

Architecture

- SOLID
- Hexagonal Architecture
- Domain Drive Design

THIRD-PARTY SERVICES

- S3, SQS, EC2, ECS (AWS)
- Buró de crédito
- Meta Map
- Quién es Quién
- Firebase Cloud Messaging
- Mailjet
- Sendgrid
- KMS (GCP)
- Airwallex

ADDITIONAL INFORMATION

Basic Knowledge

- React JS
- Kubernetes
- GCP
- HTML
- CSS
- JavaScript
- Vue

Currently Learning

- Test Driven Development
- Event Sourcing
- Domain Drive Design
- CQRS
- Java
- Spring Boot
- English
